## PROJECTS

### College Admission Prediction System for MHT-CET Aspirants

December 2025

- **Tools Used:** Python, Flask, XGBoost, pandas, numpy, scikit-learn, Excel Dataset
- The system predicts suitable engineering colleges for students based on CET percentile, rank, category, branch, and city.
- It analyses multi-year cut-off data to recommend colleges under three categories—Top, Safe, and Lower—helping students make accurate, data-driven admission decisions.

### Leave Management System

November 2025

- **Tools Used:** HTML, CSS, JavaScript, PHP, MySQL, Bootstrap, Git, GitHub
- The system automates the leave application and approval process for organizations or educational institutions. It enables users to apply for leave online while allowing administrators to approve, reject, and manage requests through a centralized database, improving efficiency, transparency, and record management.
